EN SCIENCE

## Mendeley

Un outil pour gérer sa bibliographie

# Sommaire

1. Découvrir et prendre en main le logiciel
2. Enregistrer des références bibliographiques Niveau 1 & 2
3. Gérer et classer les références
4. Gérer et exploiter les documents associés
5. Utiliser et citer des références Niveau 1 & 2
6. Echanger, partager des références Niveau 2

NB : Ce support représente les deux niveaux d'apprentissage du logiciel (basique et avancé).

Les diapos relevant du niveau 2 sont signalées par ce logo :

Niveau  
2

# Information

**Important**

- Ce manuel présente à la fois :
  - la version Mendeley desktop, qui n'est plus disponible au téléchargement depuis le 01/09/2022 mais qui est toujours fonctionnelle
  - la nouvelle version Mendeley Reference Manager

# Découvrir et prendre en main Mendeley

Section 1

# Qu'est ce que Mendeley ?

- Projet créé en 2008 par des chercheurs et développeurs Open Source.
- Racheté par Elsevier en avril 2013
- Une version gratuite (stockage en ligne limité à 2GB) et des packages « Premium » payants

- **Outil bibliographique**

- pour gérer, partager, lire, annoter et citer des références bibliographiques

- **Réseau social**

- Permettant le partage de travaux et de doc entre scientifiques

collaboration

# Qu'est ce que Mendeley ?

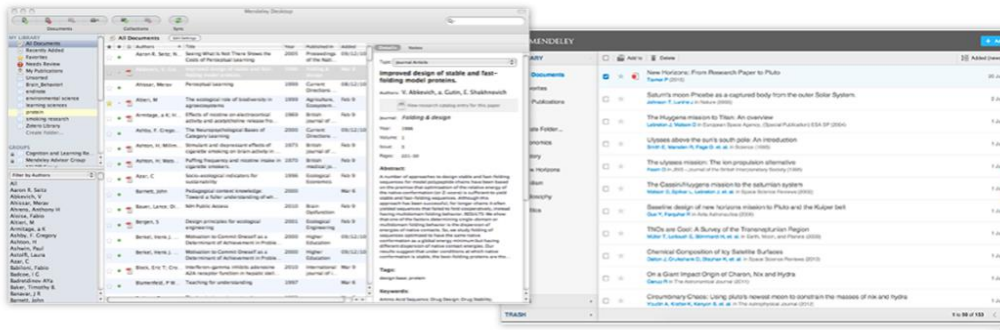

- Outil multi système

- Compatible avec les principaux navigateurs

- 2 versions

Desktop

Web

S1-1 Comment  
installer le logiciel ?

# 1- Créer son compte en ligne

- A partir de <http://www.mendeley.com>, cliquer sur « Create a free account » et suivre les instructions en 3 étapes

## 2- Installer la version logicielle : Mendeley Reference Manager desktop

- A partir de la page <https://www.mendeley.com/download-reference-manager/windows>

Important

La version Mendeley Desktop n'est plus disponible au téléchargement mais continue de fonctionner

La version à télécharger est la version Mendeley Reference Manager for desktop

### Mendeley Reference Manager for Desktop

Liste des références  
(et docts) du dossier actif

Moteur de recherche

The screenshot shows the Mendeley Desktop application interface. On the left, there is a sidebar with 'My Library' and 'All Documents' sections. The main area displays a list of references in a table format. A search bar is located at the top right. A context menu is open over one of the references, showing options like 'Update Details', 'Open File', 'Export...', and 'Delete Documents'. A 'Filter by My Tags' dropdown is visible at the bottom left. The interface is annotated with several callouts in French:

- Liste des références (et docts) du dossier actif**: Points to the main reference list.
- Moteur de recherche**: Points to the search bar at the top right.
- Dossiers personnels (Folder) et/ou partagés (=Group)**: Points to the 'My Library' sidebar.
- Menu contextuel**: Points to the context menu over a reference.
- Référence favorite lu / non lu**: Points to the star icon in the reference list.
- PDF disponible PDF prêt à télécharger**: Points to the PDF icon in the reference list.
- 3 onglets "Reference" (infos bibliographiques, tags, notes, contenus...)**: Points to the 'Details' panel on the right.
- Menu : View – Au choix : affichage des références en format tableau (entêtes cliquables) ou bibliographique (selon un style)**: Points to the bottom of the reference list.
- Filtres**: Points to the 'Filter by My Tags' dropdown.

# Interface Mendeley Reference Manager

The screenshot shows the Mendeley Reference Manager interface. The top bar includes the application name and menu options (File, Edit, Tools). The left sidebar contains navigation options like 'Library', 'Notebook', '+ Add new', and various collections and groups. The main area displays a list of references with columns for authors, year, and title. A search bar is located at the top right. A right-hand pane shows details for a selected reference, including tabs for 'Info', 'Annotations', and 'Notebook'. Callout boxes provide explanations for specific UI elements: 'Accès aux notes des PDF' points to the 'Notebook' tab; 'Moteur de recherche' points to the search bar; 'Filtres' points to the filter icon; 'Liste des références (et docts) du dossier actif' points to the main reference list; 'Dossiers personnels (Collection) et/ou partagés (=Group)' points to the left sidebar; 'Référence favorite lu / non lu' points to the star and dot icons; 'PDF disponible' points to the checkmark icon; 'PDF prêt à télécharger' points to the download icon; and '3 onglets "Reference"' points to the right-hand pane tabs.

Détail et édition d'une référence

# S1-4 Paramétrages

**Mendeley Reference Manager** : certaines fonctionnalités ne sont pas disponibles

# Paramètres et options : menu Tools puis Options

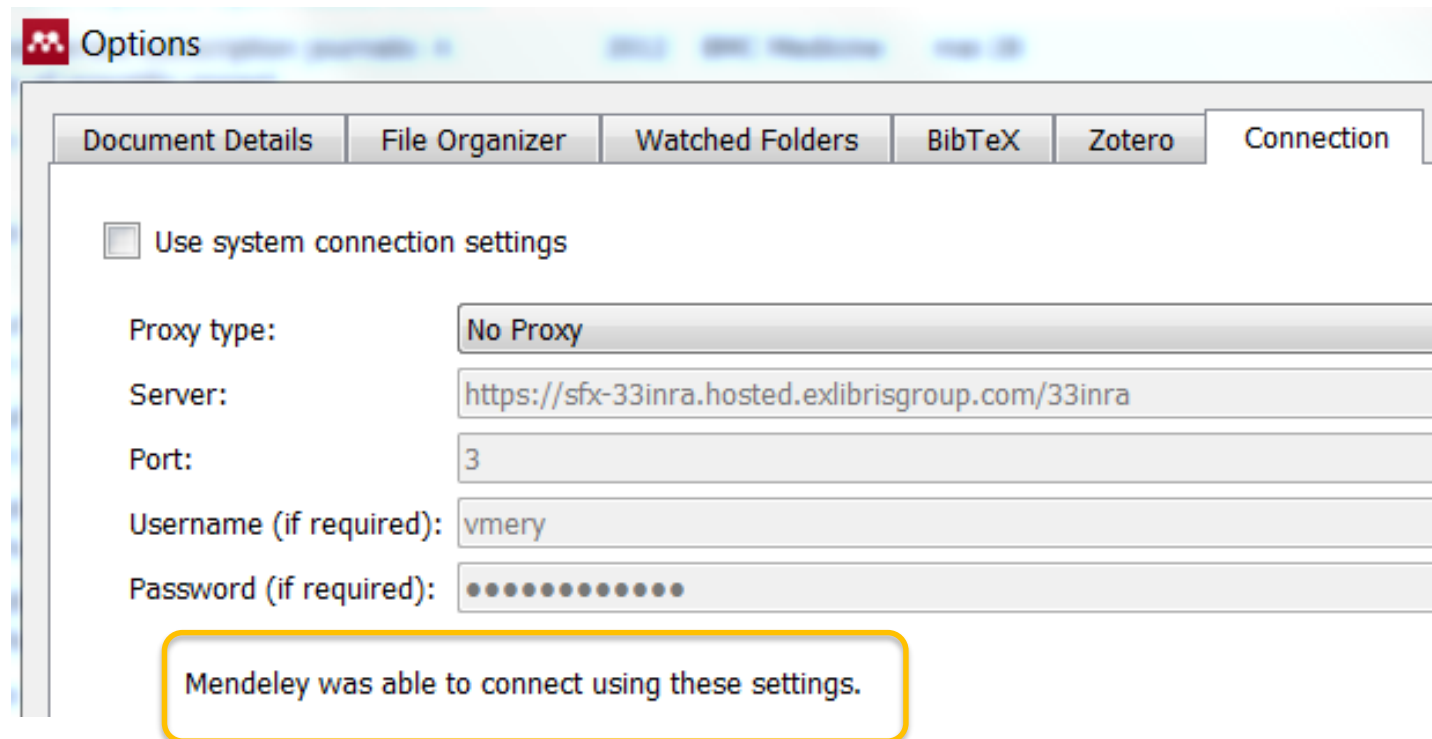

The screenshot shows the 'Options' dialog box with several tabs: Document Details, File Organizer, Watched Folders, BibTeX, Zotero, and Connection. The 'Document type' is set to 'Journal Article'. The 'Show fields' list includes Title, Authors, Abstract, Tags, Journal, Volume, Issue, Pages, Year, URL, Author Keywords, Files, Hide from Mendeley Web Index, Application Number, ArXiv ID (checked), Chapter, Citation Key, City, Code, and Country.

Callouts provide the following information:

- Watched Folders:** veille sur des dossiers
- Paramétrage connexion internet**
- File Organizer:** paramétrage du dossier de stockage des pdf, des règles de classement et de nommage de ces fichiers
- BibTeX / Zotero:** (paramétrage, synchronisation)
- Document Details:** sélection des champs descriptifs / type doc

# Paramétrage et options

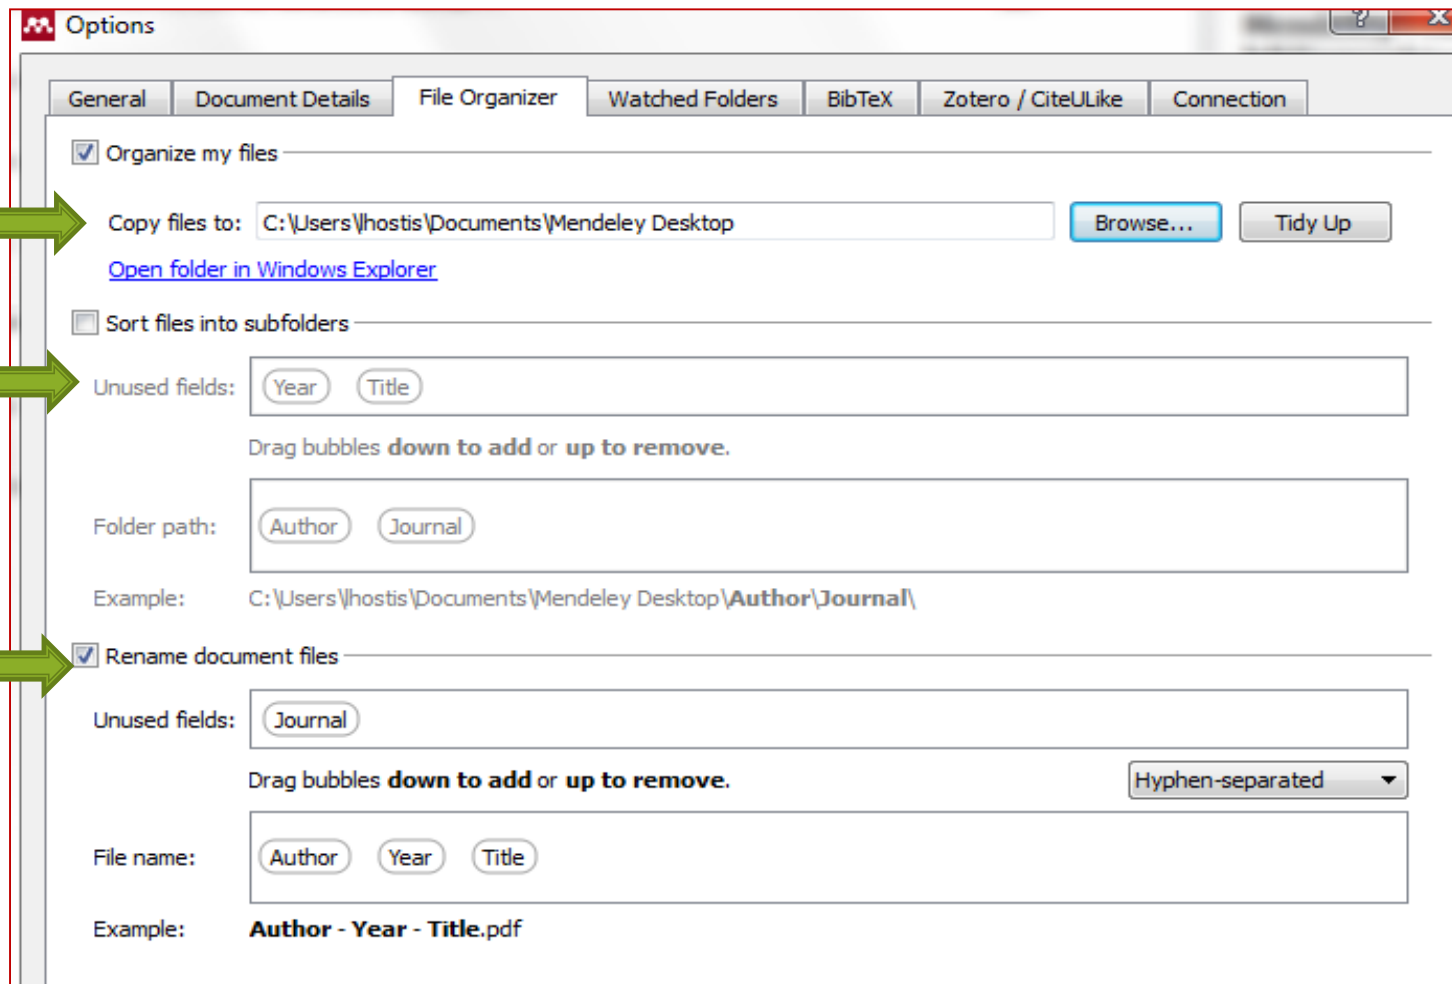

- Connexion Internet

# Gérer les PDF associés à ses références

Mendeley enregistre les fichiers associés aux références dans un répertoire spécifique : 2 classements possibles dans des Subfolders

Possibilité de définir une règle de nommage des fichiers à partir de quatre champs biblio (journal, author, year, title)

The screenshot shows the 'Options' dialog box for Mendeley, with the 'File Organizer' tab selected. The 'Organize my files' section is checked, and the 'Copy files to' field is set to 'C:\Users\hstis\Documents\Mendeley Desktop'. Below this, there are options to 'Sort files into subfolders' and 'Rename document files', both of which are checked. The 'Unused fields' section for subfolders shows 'Year' and 'Title' selected. The 'Folder path' section shows 'Author' and 'Journal' selected. The 'Example' for the folder path is 'C:\Users\hstis\Documents\Mendeley Desktop\Author\Journal\'. The 'Rename document files' section shows 'Journal' selected in the 'Unused fields' field. The 'File name' section shows 'Author', 'Year', and 'Title' selected. The 'Example' for the file name is 'Author - Year - Title.pdf'. The 'Hyphen-separated' dropdown menu is set to 'Hyphen-separated'.

électroniques

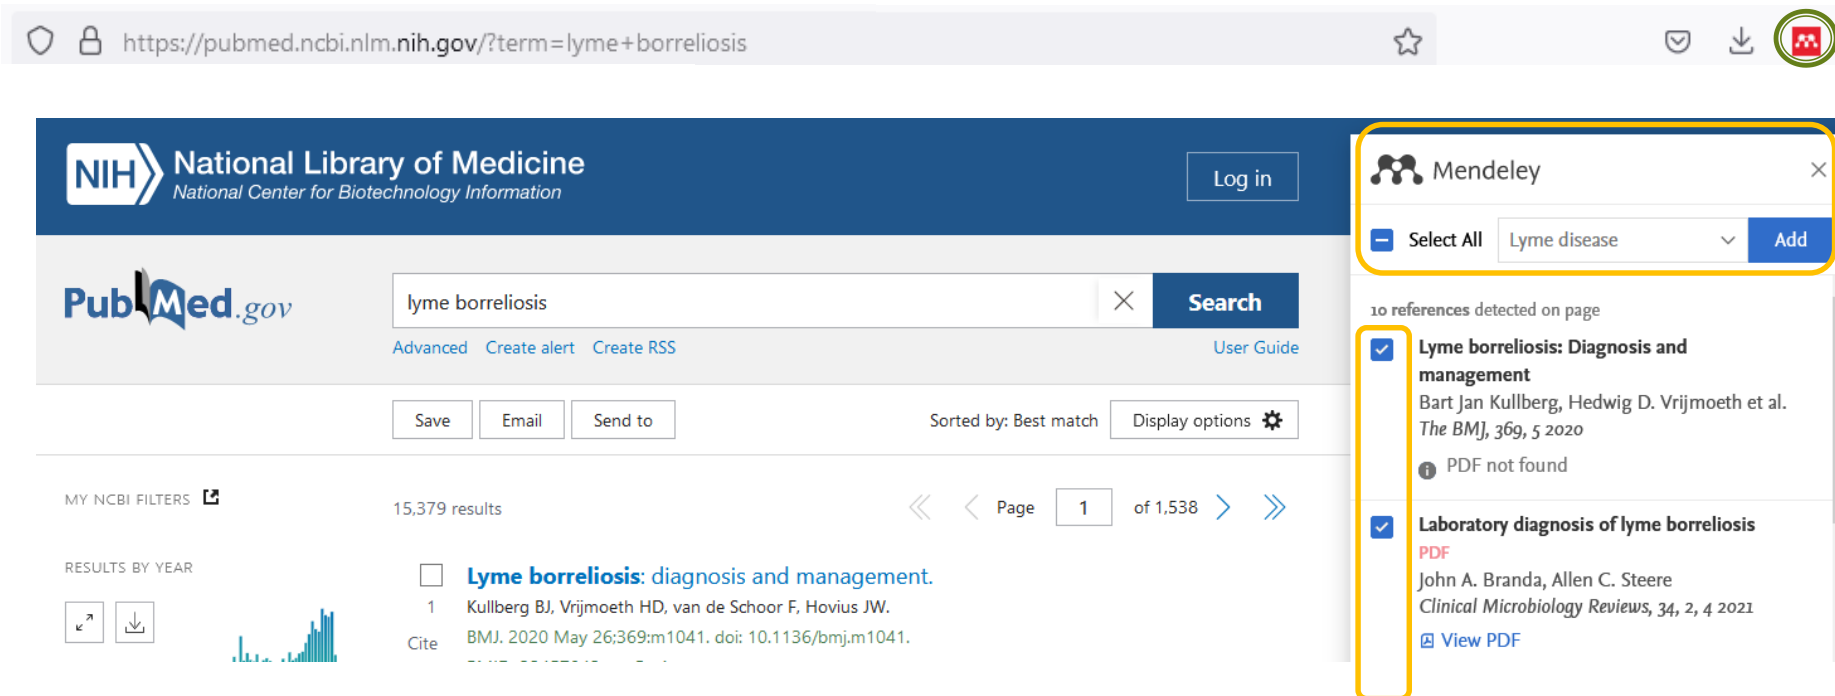

Accueil • Bases de données

Bases de données

Outils

# Importer des références par lots avec le *Web Importer*

- Fonctionne avec Web of Science, Google Scholar, Science direct, HAL, PubMed, ... lorsque vous consultez une liste de références. Cliquer sur le bouton . Le *web importer* apparaît, sélectionner les références et cliquer sur « Save »

The screenshot shows the PubMed website interface. At the top, the NIH logo and 'National Library of Medicine' are visible. The search bar contains 'lyme borreliosis' and the search results page shows 15,379 results. A Mendeley Web Importer window is overlaid on the right side of the page. The window has a title bar with the Mendeley logo and the text 'Mendeley'. Below the title bar, there is a dropdown menu with 'Lyme disease' selected and an 'Add' button. The main content of the window lists two references with checkboxes next to them:

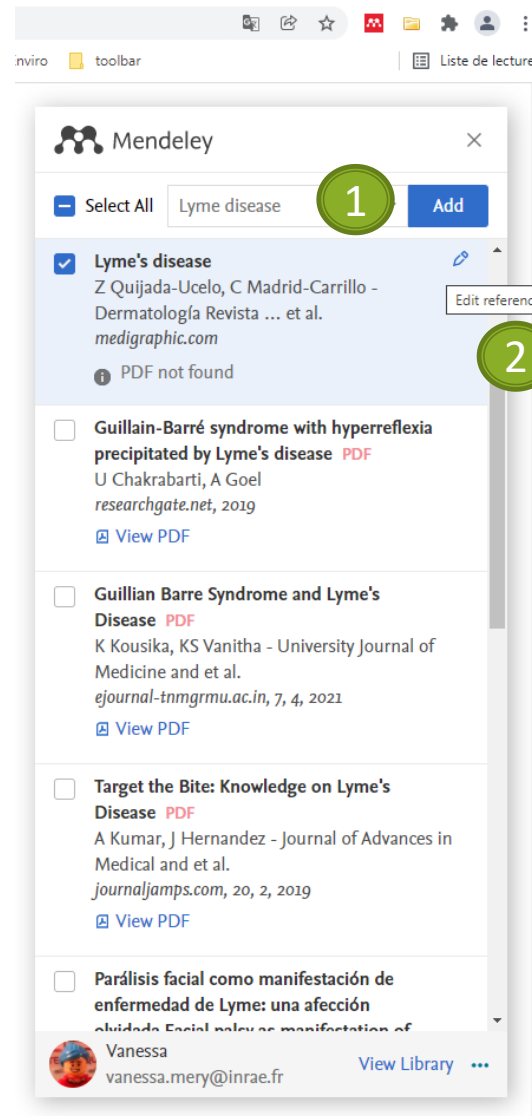

- Lyme borreliosis: Diagnosis and management**  
Bart Jan Kullberg, Hedwig D. Vrijmoeth et al.  
*The BMJ*, 369, 5 2020  
PDF not found
- Laboratory diagnosis of lyme borreliosis**  
PDF  
John A. Branda, Allen C. Steere  
*Clinical Microbiology Reviews*, 34, 2, 4 2021  
[View PDF](#)

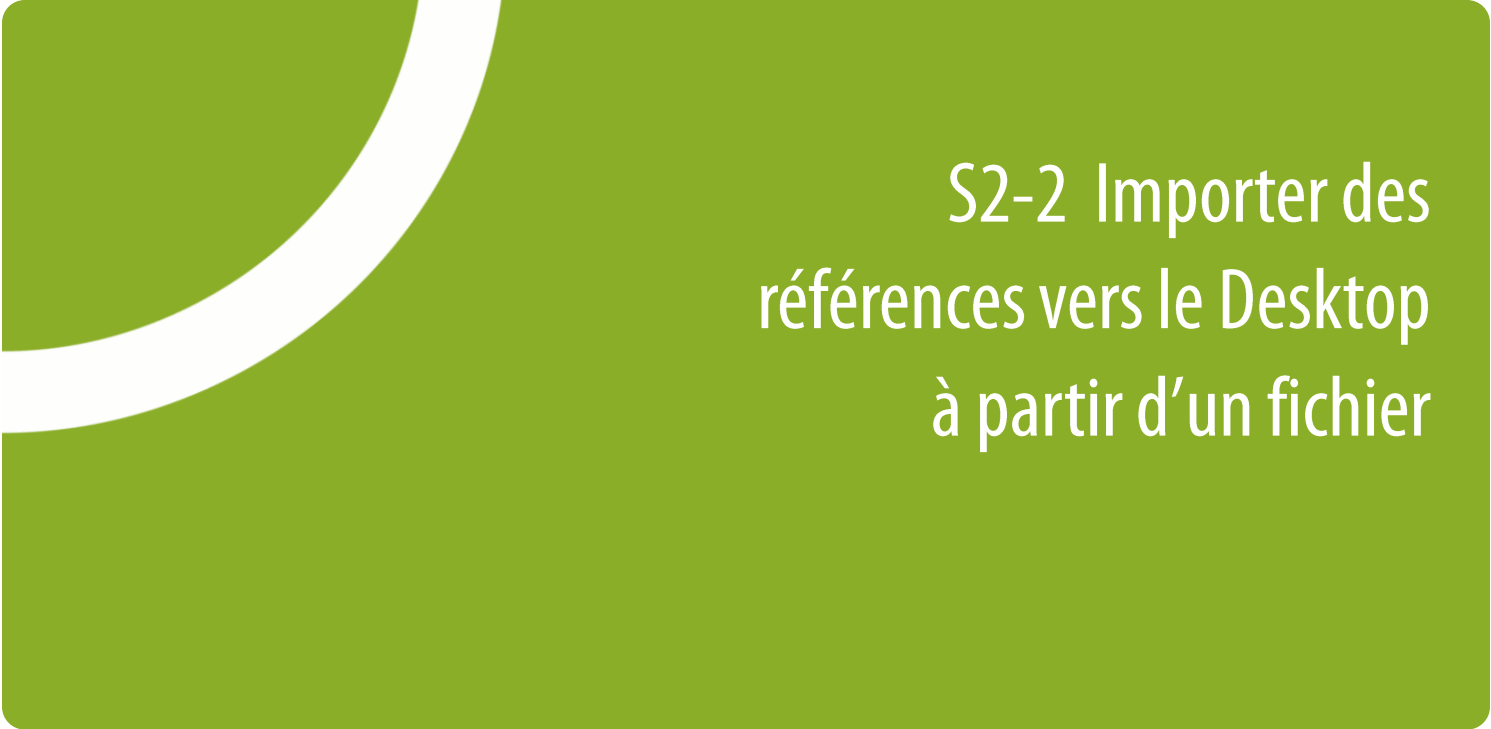

# Importer des références par lots avec Web Importer

Exporter les notices dans un dossier ou groupe de votre choix (1)

Possibilité de visualiser la référence en cliquant sur le petit crayon qui apparaît lors du survol de la référence (2).

Après sélection des références souhaitées, cliquer sur Add, ce qui va les importer dans Mendeley Web. Pour les importer dans Mendeley Desktop il faudra synchroniser, pour Mendeley Reference Manager la synchronisation est automatique.

S2-2 Importer des  
références vers le Desktop  
à partir d'un fichier

# Import indirect de références par lots

Il est possible d'importer dans Mendeley un fichier contenant une liste de références.

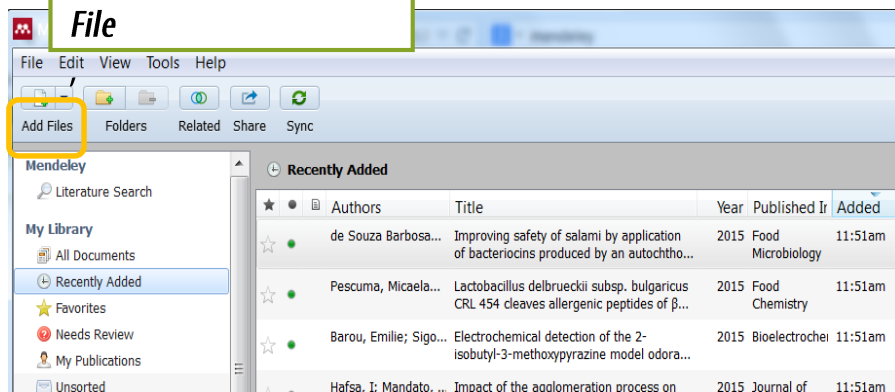

Cette procédure est intéressante si vous avez beaucoup de références à exporter :

- d'une base de données bibliographique (WoS, HAL, ...) : après une recherche qui ramène un grand nombre de références
- à partir d'autres logiciels bibliographiques : export d'un fichier de références à partir de Zotero, d'Endnote, ou de Jabref

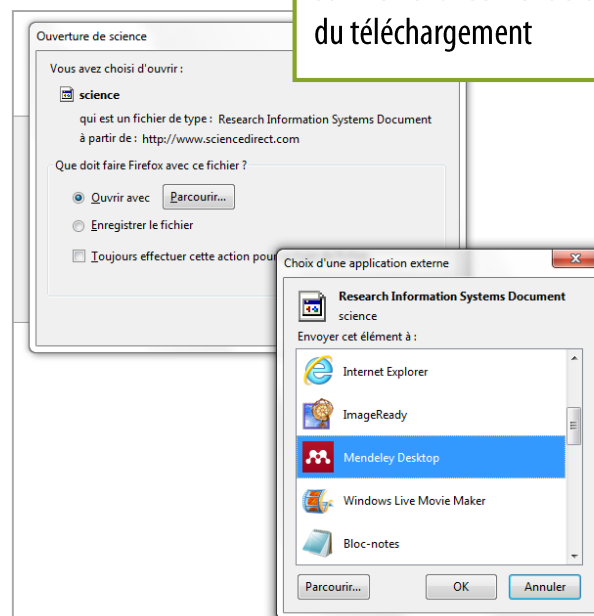

L'importation des références se fait en deux temps :

1. Enregistrement sur votre poste de travail d'un fichier exporté au format RIS, XML ou BibTex (.bib)
2. Import de ce fichier dans **Mendeley**

Avec Chrome : Bouton **Add File**

Avec Mozilla : choisir d'ouvrir son fichier avec Mendeley lors du téléchargement

# Exemple : Web of Science

**Web of Science™** Search Marked List History Alerts

Advanced Search > Results

718 results from Web of Science Core Collection for:

TS=((Soil\* OR ground\*) AND (pollut\* OR contamin\* OR accumul\*)) and (Water\* OR groundwater\* OR "ground water\*" OR ...)

Copy query link

Importer le fichier dans **Mendeley**  
(File>Import)

# Import indirect avec HAL INRAE

1. Sélectionner les références à exporter
2. cliquer sur outils, **Exporter**
3. Dans la liste, choisir **BibTex**
4. Importer dans Mendeley

The screenshot shows the HAL INRAE interface with a search bar containing 'lyme disease'. Below the search bar, there are navigation tabs: Accueil, Dépôt, Recherche, Consultation, and Boîte à outils. A search button labeled 'Rechercher' is on the right. Below the search bar, there are pagination controls (1, 2, 3) and a 'Recherche avancée...' link. A list of search results is displayed, with three items selected (checked). A 'Outils' menu is open over the selected items, showing options: XML-TEI, BibTeX, EndNote, CSV, PDF, HTML, Exporter, Export avancé..., and Syndication. A 'Pour les 3 documents sélectionnés' label is visible above the menu.

4. Importer le fichier dans **Mendeley** (File>Import)

S2-3 Créer des  
références en  
récupérant le fichier  
PDF

# Importer des PDF par lots avec Web Importer

Avec Web Importer : cliquer sur le bouton inséré dans votre navigateur :

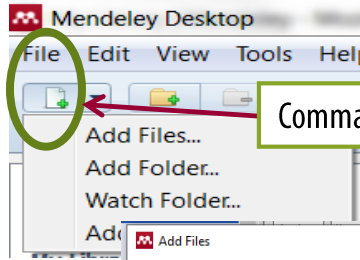

- Exemple avec Google Scholar → uniquement les PDF libres de droit

The screenshot shows a Google Scholar search for "sustainable development" agriculture review. The search results list several articles, including "Promoting sustainable intensification in precision agriculture: review of decision support systems development and strategies" and "Agronomy for sustainable agriculture: a review". The Web Importer sidebar on the right displays a list of PDF links for these articles, with a "PDF" label circled in green next to each entry. The sidebar also includes a "Select all" button, a dropdown menu for "Exercices\_Papirus", and an "Add" button. At the bottom of the sidebar, the user's name "Vanessa" and a "View library" link are visible.

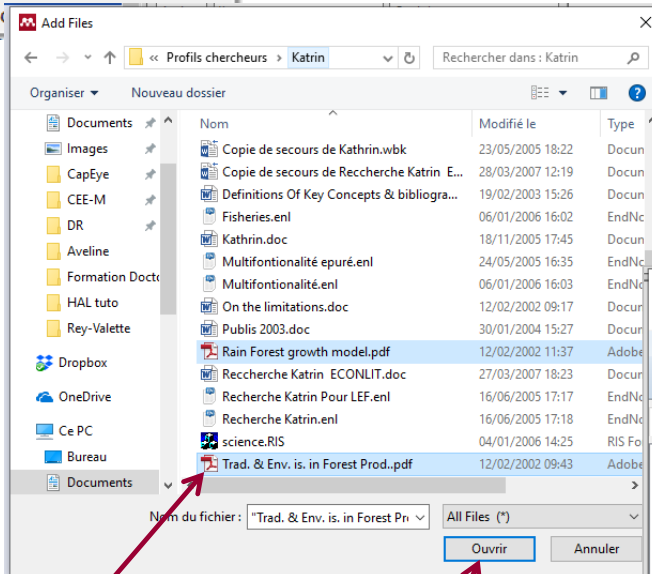

# Intégrer des fichiers PDF à partir de votre poste

- Il existe plusieurs moyens d'importer des fichiers PDF dans son interface Mendeley
- Cet import permet de récupérer les métadonnées bibliographiques à partir du fichier PDF : la référence est alors saisie automatiquement
- Il faut toujours contrôler la qualité des informations ajoutées (type de document, auteurs, etc.). Attention aux fichiers scannés, pour lesquels les métadonnées ne sont pas déchiffrées

# Interface Desktop importer un PDF

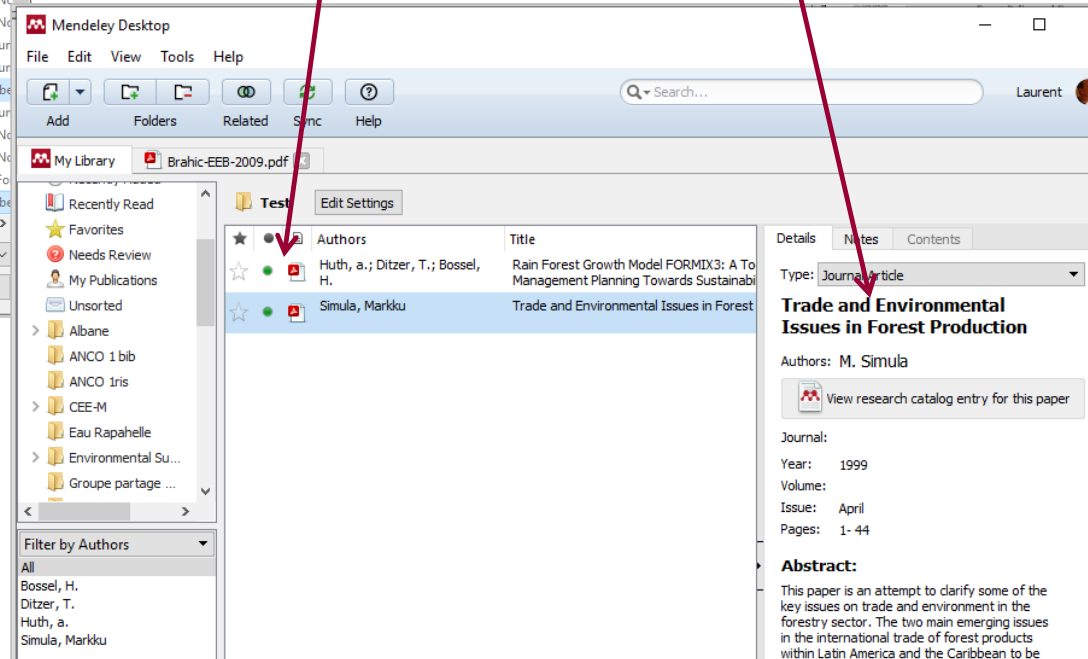

Commande « File → Add file », ou icône Add file

A partir de l'explorateur Windows, retrouver les références à importer et les sélectionner. Puis cliquer sur Ouvrir.

La référence intègre l'espace de travail de Mendely.  
Le PDF est lié à la référence, et les métadonnées bibliographiques ajoutées

# i Interface Mendeley Reference Manager importer un PDF

# Glisser-Déposer un PDF

A partir de l'explorateur Windows, glisser/déposer les documents sélectionnés dans l'interface de Mendeley

Les références et le PDF sont enregistrés dans Mendeley, et les champs sont saisis automatiquement. Attention au fichiers scannés

# Fonction « Watched Folders »

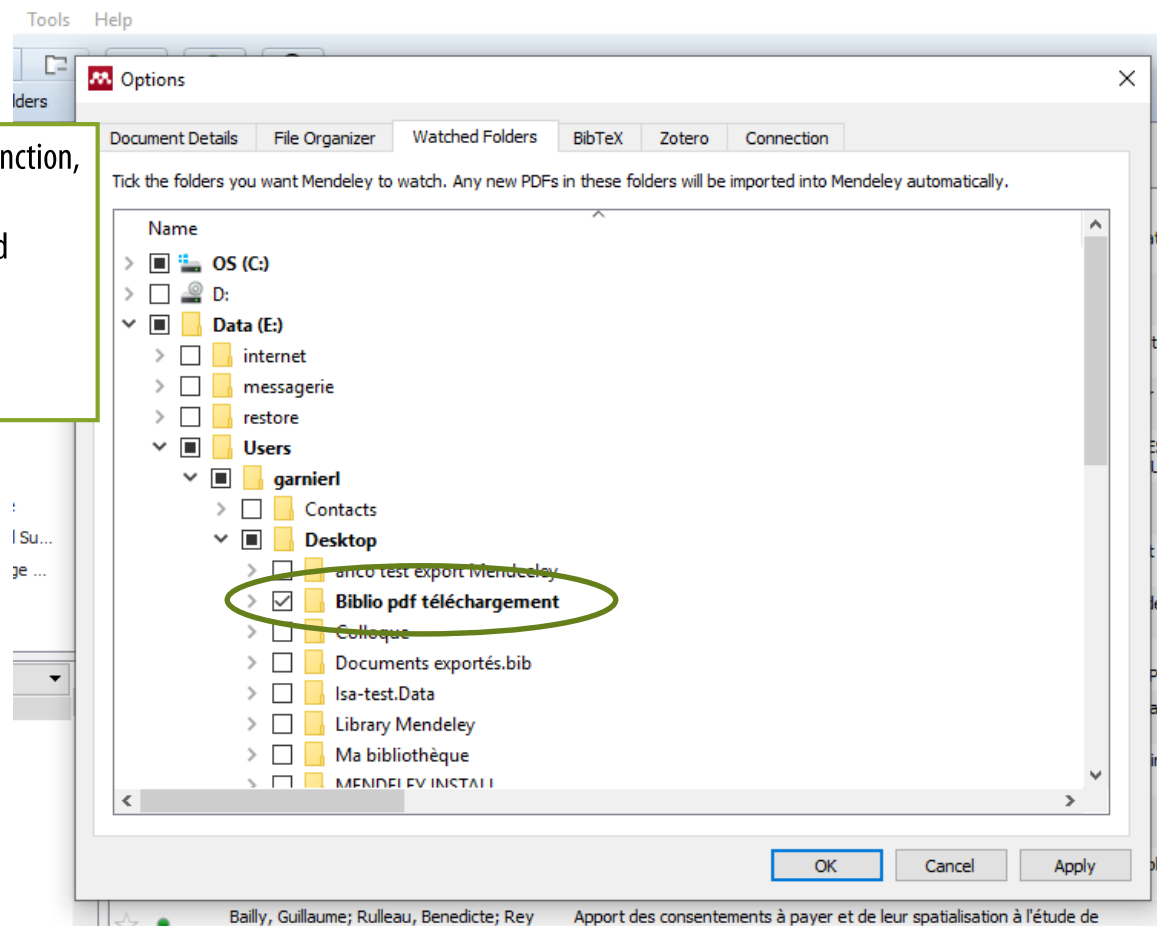

Un ou plusieurs dossiers de votre choix peuvent être mis sous surveillance.

A chaque fois qu'un PDF intègre le dossier surveillé, il est ajouté dans votre base Mendeley :

Si Mendeley est ouvert, synchroniser pour faire apparaître la référence et le PDF lié.

Si Mendeley n'est pas actif, la référence et le PDF lié seront intégrés lors de l'ouverture de Mendeley

Pour paramétrer cette fonction, menu *Tools*, → *Options*, choisir l'onglet « Watched folders ».  
Choisir ensuite le ou les dossiers à surveiller

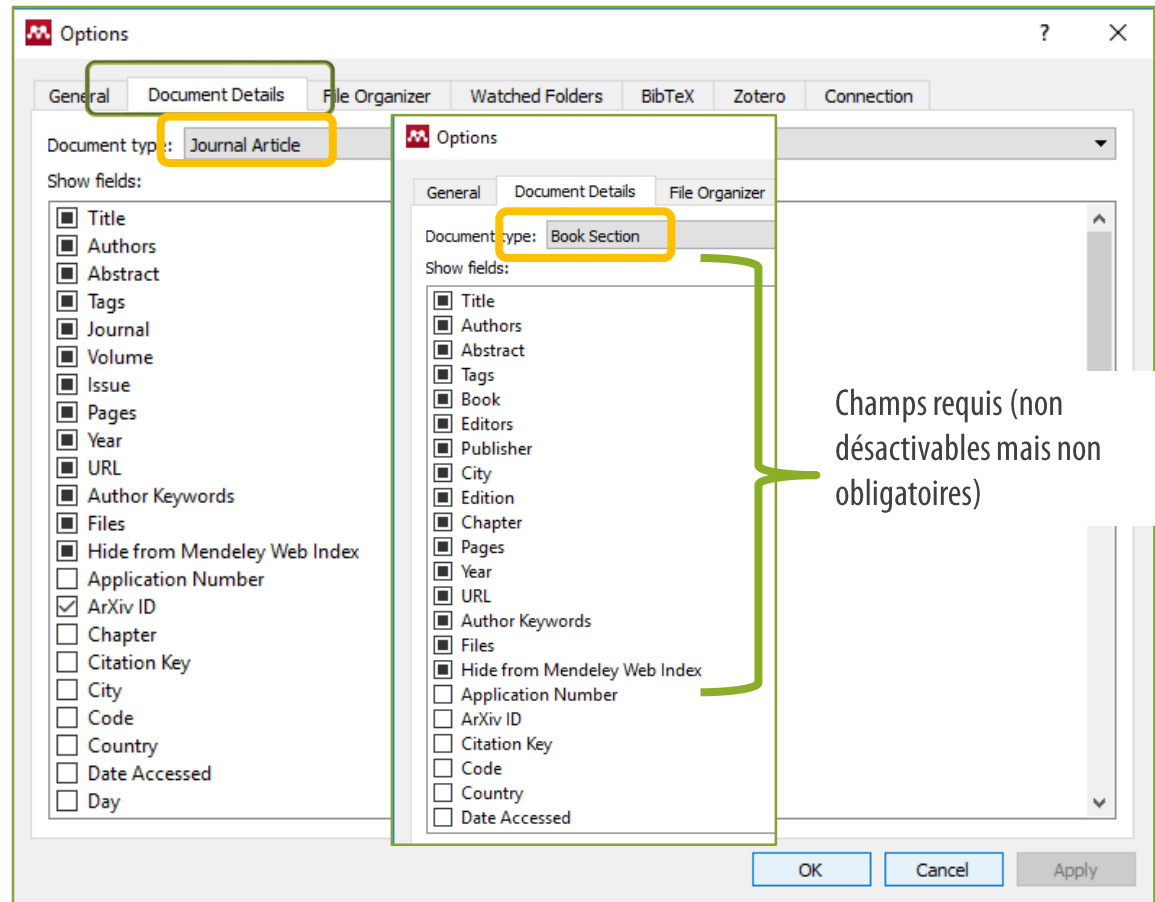

## S2-4 Saisie manuelle des références

# Mendeley Reference Manager

## Organiser sa base avec les Collections

The screenshot shows the Mendeley Reference Manager interface. On the left, there is a sidebar with a 'Library' tab and a 'Notebook' tab. Below the tabs, there is a '+ Add new' button and a list of 'COLLECTIONS' including Asthma, BDR, Barre-Sinoussi, Bibliometrie, E171, Endocrine perturbator, Enviro, Exercices\_Papirus, Glyphosate, Gut Microbia, Helicobacter, Honeybee, LogicielGestionBiblio, and Lyme disease. The main area displays a table of 'All References' with columns for 'AUTHORS', 'YEAR', and 'TITLE'. A green box highlights the text 'Sélectionner la /les référence(s)' above a row of references. A green arrow points from this box to a context menu that is open over the same row. The context menu contains the following options: 'Add to Collection', 'Add to Private Group', 'Add to Public Group', and 'Remove from Collection'. Below the context menu, there are buttons for 'Organize ^', 'Mark as v', and 'Delete'. The right side of the interface shows the 'Info' tab for a selected reference, titled 'A mechanistic model for assessing the risk of wind and snow damage to single trees and stands of Scots pine, Norway spruce, and birch'. The reference details include the authors 'Peltola H, Kellomäki S, Väisänen H et al.', the journal 'Canadian Journal of Forest Research', and the year '1999'. The abstract text is also visible.

S3-2 Personnaliser/  
gérer ses références

# Mendeley Desktop

## Personnaliser ses références : Notes et Tags

Ajouter des notes de lecture

The screenshot shows the Mendeley Desktop interface. On the left, there is a list of references with columns for 'Year', 'Published In', and 'Added'. A callout box labeled 'Onglet Notes' points to the 'Notes' tab in the right-hand pane. The 'Notes' pane shows a text area with the following content:

PREMIERE version du papier (retrouver la version définitive).  
Aborde les problématiques de Noah™'s Arch Problem (Weitzman, 1998) |

Below the text area, there is a search bar with the text 'Use' and 'Any ar will be'. A callout box labeled 'Possibilité de rechercher sur le champ Notes' points to this search bar.

Ajouter des mots-clés personnels (thématiques de votre objet de recherche)

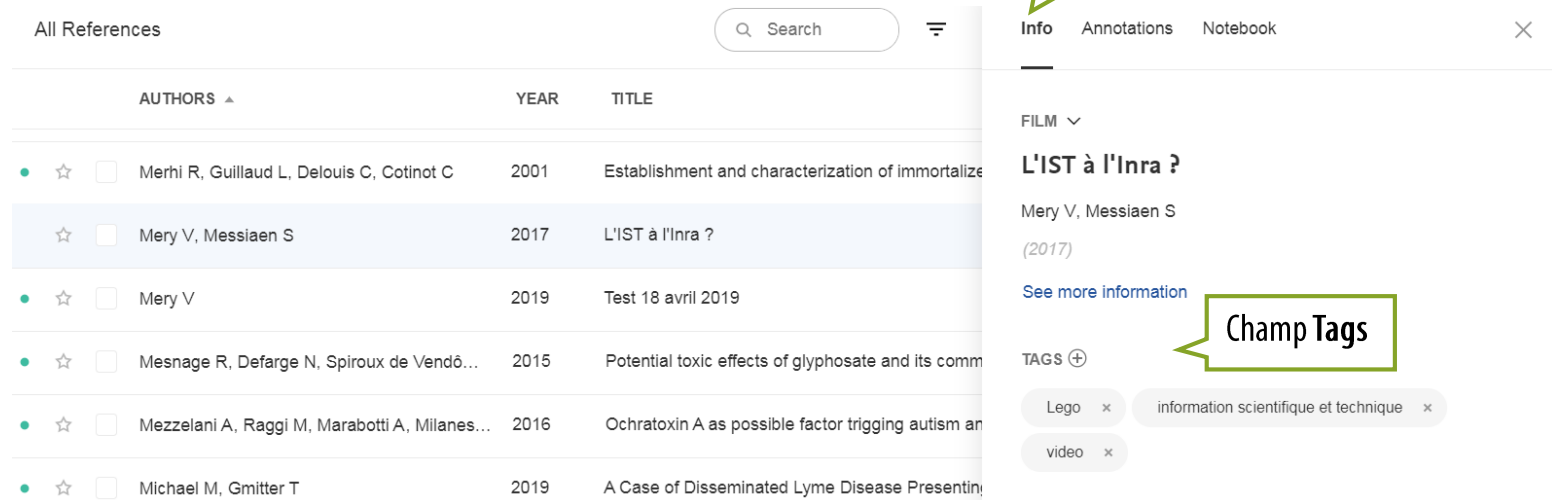

This screenshot shows the 'Tags' field in the Mendeley Desktop interface. The field contains the text 'COMPENSATION'. A callout box labeled 'Champ Tags' points to the 'Tags:' label. Below the 'Tags' field, there is a section for 'Author Keywords' with the text 'Business ecosystem; Complexity; Electronic'.

This screenshot shows the 'Tag' field in the Mendeley Desktop interface. The field contains the text 'Tag 1; Tag 2; ...'. A dropdown menu is open, showing a list of terms: 'f', 'fibre alimentaire', 'fish', 'fishes', and 'free access'. A callout box labeled 'Saisie assistée : index de termes déjà utilisés dans la collection' points to this dropdown menu.

# Mendeley Reference Manager

## Personnaliser ses références : Tags

Ajouter des mots-clés personnels (thématiques de votre objet de recherche)

The screenshot displays the Mendeley Reference Manager interface. On the left, a table lists references with columns for Authors, Year, and Title. The second reference, 'L'IST à l'Inra ?' by Mery V, Messiaen S (2017), is selected. On the right, the 'Info' sidebar is open, showing details for this reference, including the title 'L'IST à l'Inra ?', author 'Mery V, Messiaen S', and year '(2017)'. Below the title, there is a 'TAGS' section with two tags: 'Lego' and 'information scientifique et technique'. A callout box labeled 'Champ Tags' points to this section.

Guiso, Luigi; Sapienza, Paola; Zingales, Luigi	The Role of Social Capital in Financial Development
Ferraro, Paul J; Miranda, Juan Jose; Price, Michael K	The Persistence of Treatment Effects with Norm-Based Policy Instruments: Evidence from a Randomized Environ.

Mendeley modifie ensuite toutes les références concernées par la modification

# S3-3 Rechercher dans sa base

# Mendeley Desktop

## Organiser sa base. Rechercher (1)

Recherche dans toutes les collections  
ou dans une collection spécifique

Recherche tous champs ou affinée par  
année, titre, revues, notes ...

The screenshot shows the Mendeley Desktop interface. At the top, there is a menu bar (File, Edit, View, Tools, Help) and a toolbar with icons for adding documents, folders, and syncing. A search bar is located in the top right corner. The main area is divided into a left sidebar, a central document list, and a right sidebar for details.

**Left Sidebar:** Contains 'Mendeley' (Literature Search, Mendeley Suggest), 'My Library' (All Documents, Recently Added, Recently Read, Favorites, Needs Review, My Publications, Unsorted), 'Groups' (Test - groupe 1, WebData, Test - groupe 4, AI-Fruit, Bibliométrie Inra, Data publishing, logiciels bibliographiques), and 'Trash' (All Deleted Documents). A 'Filter by Publications' dropdown is visible at the bottom left.

**Central Document List:** A table with columns: Authors, Title, Year, Published In, Added. The list includes entries like 'Position of the American Dietetic Association: health implications of dietary fiber.', 'Bacterium producing Enterococcus faecalis isolated from chicken gastrointestinal tract...', 'Pepsin diffusion in dairy gels depends on casein concentration and microstructure', 'Handbook of Dietary Fiber', 'Health benefits of dietary fiber', 'Methods for dietary fiber: neutral detergent fiber, and nonstarch polysaccharides in relation to animal nutrition.', 'Cardiovascular benefits of dietary fiber', 'The definition of dietary fiber', 'VertNet: a new model for biodiversity data sharing.', 'Diesel engine performance and exhaust gas emissions using Microalgae Chlorella protothecoides biodiesel', 'Esterification of free fatty acids with methanol to biodiesel using heterogeneous catalysts: From model acid oil to microalgae lipids', 'Trapping of carvacrol by konjac glucomannan-potato starch gels: Stability from macroscopic to microscopic scale, using image processing', 'Screening of marine microalgae isolated from the hypersaline Bardwail lagoon for biodiesel feedstock', 'Levelized cost of energy and financial evaluation for biobutanol, algal biodiesel and biohydrogen during commercial development', 'Understanding aroma release from model cheeses by a statistical multiblock approach on oral processing', 'Genetically modified algae produce hydrogen biofuel at five times their normal yield', 'Review and experimental study on pyrolysis and hydrothermal liquefaction of microalgae for biofuel production', 'Assessment of diesel engine performance when fueled with biodiesel from algae and microalgae: An overview', 'Microwave drying characteristics of microalgae (Chlorella vulgaris) for biofuel production', 'No Title', 'JOURNAL OF APPLIED PHYCOL...', 'ALGAL RESEARCH-BIOMASS BIOFUE...', 'RSC ADVANCES', 'APPLIED BIOCHEMISTRY A...', 'FUEL', 'INTERNATIONAL SUGAR JOURNAL', 'JOURNAL OF CLEANER PRODU...', 'GREEN CHEMISTRY', 'ENERGY'.

**Right Sidebar:** Shows details for the selected document 'The definition of dietary fiber'. It includes 'Type: Journal Article', 'Authors: J. DeVries, M. Camire, S. Cho et al.', 'Journal: Cereal Foods World', 'Year: 2001', 'Volume: 46', 'Issue: 3', 'Pages: 112-129', 'Abstract: A definition for dietary fiber was adopted in June 2009 by the Codex Alimentarius Commission based on the recommendation for endorsement of the Codex Committee on Nutrition and Foods for Special Dietary Uses (CCNFSDU) in November 2008. The definition listed three categories of carbohydrate polymers that are not hydrolyzed by the endogenous enzymes in the small intestine of humans. However, the definition left the inclusion of carbohydrates with degrees of polymerization (DP) in the range of 3 and 9 to the discretion of national authorities and left the physiological effect(s) of benefit to healthy as undefined. The ILSI Europe and ILSI North America's committees on dietary carbohydrates organized a forum at the Ninth Vahouly Fiber Symposium in 2010 to discuss these implementation issues with the objective of building scientific consensus on how to resolve them. The results of this session are encouraging and indicated that the scientific community agrees on maintaining a worldwid...', 'Tags:', 'Author Keywords:', 'URL: Add URL...', 'Catalog IDs: ArXiv ID: DOI: 10.3402/fr.v540.5750 ISBN: 1654-661X (Electronic)/1654-661X (Linking) ISSN: 01466283 PMID: 21052531', 'Files: Add File...', 'Other Settings:  Unpublished work - exclude from Mendeley Web catalog'.

**Search Filters:** A dropdown menu is open, showing options: 'Filter by Publications', 'Filter by Author Keywords', 'Filter by Authors', 'Filter by My Tags', 'Filter by Publications'.

**ABSTRACT:** Natural <sup>15</sup>N abundance ( $\delta^{15}\text{N}$ ) varies between individual amino acids (AAs). We hypothesized that  $\delta^{15}\text{N}$  of nontransaminating and essential AAs ("source" AAs, such as phenylalanine) present in animal tissues could be used as a marker of dietary origin, whereas  $\delta^{15}\text{N}$  of transaminating AAs ("trophic" AAs, such as glutamic acid) could give more detailed insights into animal feed efficiency. Two diets based on dehydrated Lucerne pellets were tested in growing lambs, which promoted different feed efficiencies. No dietary effects were noted on  $\delta^{15}\text{N}$  of any AAs analyzed in lamb muscle. In addition,  $\delta^{15}\text{N}$  of phenylalanine was unexpectedly similar to that of glutamic acid, suggesting that  $\delta^{15}\text{N}$  of AAs is significantly derived from the metabolism of the rumen microbiota and, thus, are not suited for diet authentication in ruminants. In contrast, the  $\delta^{15}\text{N}$  of transaminating AAs facilitates an improved prediction of animal feed efficiency compared to the classical isotopic bulk N analysis.

**INTRC** Livestock + the efficiency of food for h account t edible for informati sought by animal to the ability authentication of feeding practices, is thus a current concern for the livestock industry. Natural <sup>15</sup>N abundance ( $\delta^{15}\text{N}$  expressed in ‰; i.e., the <sup>15</sup>N/<sup>14</sup>N ratio referenced to an international standard) of animal tissue ( $\delta^{15}\text{N}_{\text{animal}}$ ) reflects that of animal diet ( $\delta^{15}\text{N}_{\text{diet}}$ ) plus a small and positive diet–animal isotopic fractionation factor ( $\Delta^{15}\text{N}_{\text{animal-diet}} = \delta^{15}\text{N}_{\text{animal}} - \delta^{15}\text{N}_{\text{diet}}$ ), called the trophic effect. In an attempt to authenticate meat produced from low-

lower  $\delta^{15}\text{N}_{\text{diet}}$  value (1.1 vs 2.6‰). This may be explained by recent results from our laboratory showing that variations in animal (ruminant) tissues and diets in terms of trophic N composition ( $\Delta^{15}\text{N}_{\text{animal-diet}}$ ) are dependent on differences in the efficiency of N utilization.<sup>1</sup> Both isotopic tracers are thus interconnected. First, dietary authentication reliability may be impaired by differences in feed (N) efficiency; that is,  $\delta^{15}\text{N}_{\text{animal}}$  becomes different from  $\delta^{15}\text{N}_{\text{diet}}$  as N efficiency use decreases. Second, feed efficiency assessment through  $\Delta^{15}\text{N}_{\text{animal-diet}}$  relies heavily on an accurate knowledge of diet isotopic composition, which remains unknown in most field cases. Therefore, measurements of bulk N isotopic analysis have limitations for both diet authentication when the isotopic N compositions of potential feed resources are close and feed efficiency prediction when diet composition is not known. Natural <sup>15</sup>N abundance differs substantially among individual amino acids<sup>2–7</sup> according mainly to their ability to be trans-

## A B S T R A C T

The aim of this study was to explore the biochemical and genetic features of the two-produced by a *Lactobacillus plantarum* strain isolated from Italian type salami pro *plantarum* MBSa4). Identification of bacteriocinogenic *Lb. plantarum* MBSa4 was performed by sequencing. Expressed bacteriocin was evaluated for spectrum of activity, heat and stability of action, and molecular mass. Partial purification was achieved by cation-exchange phase - HPLC. Total DNA of *Lb. plantarum* MBSa4 was extracted and tested for pre-described bacteriocin genes. Bacteriocin MBSa4 was heat-stable, unaffected by pH 2 against all tested *Listeria monocytogenes* strains and most of tested fungi. Maximal production (100 mg/ml) in MRS broth occurred after 22 h at 25 °C, presenting bacteriostatic activity as action of two components. The molecular mass determined by SDS-PAGE was 2.3 kDa. DNA indicated the same nucleotide sequence of plantaricin W. Results indicate MBSa4 produces plantaricin W, a two-peptide lantibiotic with remarkable anti-*Listeria* activity. © 2015 Elsevier Ltd.

**ABSTRACT**

A total of 230 isolates of lactic acid bacteria were isolated from gastrointestinal tracts (GIT) of indigenous chickens purchased from local market in Bang Rakam district, Phitsanulok, Thailand. Among 230 isolates, only 7 isolates, named CM6CR07, CM6CR11, CF1G15, CF1G14, CF1G17-1, CF1G17-2 and CF1G1 19 showed an inhibition zone against indicator strains. Bacteriocin activity was completely inactivated when Neutralized Cell Free Supernatants (NCFS) of the isolates were treated with proteases, confirming the proteinaceous nature of the bacteriocin component. NCFS of all selected bacteriocin producing lactic acid bacteria (SBP-LAB) retained their bacteriocin activity after heating at 100 °C for 30 min. All of SBP-LAB were identified as *Enterococcus faecalis*. These *Ent. faecalis* isolates harbored the same virulence genes. All strains were positive for *gelE* (gelatinase), *efaA<sub>6</sub>* (cell wall adhesins), *hyl* (hyaluronidase), *ace* (adhesin of collagen protein), *cytL<sub>4</sub>* (cytolysin structural subunit) and *cytL<sub>5</sub>* (cytolysin structural subunit) and were negative for *asaI* (aggregation substance), *agg* (aggregation protein involved in adherence to eukaryotic cells), and *esp* (enterococcal surface protein). These *Ent. faecalis* showed a wide range of inhibitory spectrum against food-spoilage and food-borne pathogens when studied by agar spot test. The CFS and NCFS also inhibited some of food-spoilage and food-borne pathogenic indicator strains when checked by agar well diffusion assay. All of these *Ent. faecalis* survived simulated stomach conditions, whereas all of them could survive in conditions of simulated intestinal juice.

## Introduction

Muskoxen are a natural species for farming in Alaska. They evolved in the arctic, adapt well to basic husbandry practices, and produce a luxurious fiber called *qiviut* (Rowell et al., 2001). The morphology of the female reproductive tract and the cyclic pattern of steroid and gonadotropin secretion are similar to those in domestic sheep and goats (Rowell et al., 1987; Rowell

and Flood, 1988; Rowell et al., 1993). Muskoxen breed from mid-August through September. The onset of the breeding season is characterized by a short (8 to 10 d) cycle, followed immediately by an estrous cycle of normal length, 18 to 21 d (Rowell and Flood, 1988).

Although muskoxen are similar to sheep and goats in many respects, some of their differences have serious impacts on management. The detection of estrus in muskoxen is difficult. Cows rarely exhibit behaviors such as mounting conspecifics or standing to be mounted, and the use of a vasectomized bull met with variable success (Rowell, 1991). A common practice in muskox farming is to maintain cows and bulls separately, except during the breeding season. Harems are formed anywhere from early August to early September and are usually left together for at least six wk (White et al., 1998). During this time, rutting bulls are very aggressive, dangerous to handle, and destructive to property. Thus, bull management and controls over the

mosomes to spermatozoa. Electrophoretic analysis revealed that protein composition is different from the epididymal soluble compartment as well as from similar vesicles present in the semen. Protein association with epididymosome is very strong as revealed by resistance to extraction with detergent. Matrix-assisted laser desorption ionization time-of-flight as well as immunodetection techniques have been used to identify some proteins associated to epididymosomes and spermatozoa. An aldose reductase known for its  $20\alpha$ -hydroxysteroid dehydrogenase activity and the cytokine (macrophage migration inhibitory factor) have been identified. These two proteins have been immunolocalized in principal cells of the epididymal epithelium, a more intense signal being detected in the distal epididymal segment as well as in the vas deferens. Database search revealed that these two proteins are characterized by the lack of a signal peptide. These results are discussed with regard to a possible apocrine mode of secretion of these proteins acquired by spermatozoa during the epididymal transit.

*epididymis, gamete biology, male reproductive tract, sperm, sperm maturation*

## INTRODUCTION

During the epididymal transit, spermatozoa acquire new surface proteins involved in maturation of the male gamete [1]. Synthesis and secretion of these proteins by the epididymal epithelium are known to be under androgen control [2, 3]. The mechanisms of interaction of these proteins with the sperm surface have been thought to involve electrostatic interactions, thus referring these epididymal sperm proteins as coating proteins. Using different extraction procedures, it appears that many sperm surface proteins acquired during

with carbonyl reductases [8, 9]. These proteins named P26h [10, 11], P34H [12], and P25b [13] in hamster, human, and bull respectively, are involved in sperm-zona pellucida interactions. P26h and P25b have also been shown to be GPI anchored to the sperm plasma membrane during the epididymal transit [5, 14]. In the epididymal lumen, these proteins are associated with membranous vesicles called epididymosomes. Many other unidentified proteins are associated with these vesicles. Selected proteins, including P26h/P25b, are transferred from epididymosomes to define membranous domains of the spermatozoa during the epididymal transit, at least in hamster and bovine. In vitro studies have shown that this protein transfer is pH and temperature dependent and that zinc, at a concentration similar to that found in the epididymis, enhances the efficiency of transfer [15]. Prostatosomes are vesicles similar to epididymosomes that have been characterized in the semen of different mammalian species. Prostatosomes have been described as secretory constituents of the prostate and proposed to play key roles in sperm maturation and protection against oxidative stress and female's immune response and stabilization.

To further understand the role of epididymosomes in sperm maturation, we have identified other proteins that are secreted from the epididymis. The bovine was used as a model because its epididymosomes are prepared from noncontaminated semen.

## Introduction

The cell biology of the vascular endothelium is of great interest because of the critical involvement of endothelial cells in normal and pathological development. Vascular endothelial cells maintain a selectively permeable barrier mediating bidirectional transport of cells and substances to and from the blood and interstitium [7]. Alterations of the hormonal status as occurring during pregnancy may influence diverse cell functions of the vascular endothelium relevant to intra- and intercellular communication [1, 28]. An organ playing a central role in the reproductive process is the corpus luteum (CL) and nearly 75% of the cells in the mature CL are of vascular origin [8]. The main function of the CL, which develops from the granulosa and theca cells of the ovarian follicle, is to secrete the hormone progesterone [39]. If fertilization and implantation do occur, the CL is transformed into a CL of pregnancy. The CL is involved in the initiation and maintenance of pregnancy as well as in the inhibition of estrous in pregnancy [10]. Inadequate luteal function leads to death of the embryo or foetus in most mammalian species [20, 26].

In addition to being determined by hormonal factors, the life of luteal cells is determined by the preservation of luteal vascularization [11]. Therefore the function of the CL is dependent on the growth and development of its capillary endothelium and an essential part of CL development is the recruitment of blood supply [53].

Different aspects of the vascular endothelium of the CL of the estrous cycle have been examined repeatedly, but

## Find and edit CSL citation styles

Search for the name of a style, the title of a Journal, or [search by example](#).

**Note:** This set of tools is still in public beta. Please report any bugs or feedback using the form at the top right of the screen.

### 1. Find a style

#### Search by name

If you're looking for a style like APA, Harvard, etc... just use the search box at the top of the page to search for a style name, or journal title.

#### Search by example

If you don't know the name of the style, but know what the final citation should look like, you can use our [search by example](#) tool to find styles that most closely match.

INLINE CITATION
(McInnis & Nelson, 2011)
BIBLIOGRAPHY
McInnis, M. D., & Nelson, L. P. (2011). <i>Shaping the Body Politic: Art and Political Formation in Early America</i> . University of Virginia Press.

### 2. Edit the style

If you can't find a style that quite suits your needs, find one that's a pretty close match and click the "Edit style" button to open that style in the [visual editor](#).

American Journal of Medical Genetics	
INLINE CITATION	[McInnis and Nelson, 2011]

Style : American Sociological Association

Olive origin is still unclear. The Greeks questioned whether the possible origin of cultivated olive trees (*Elaie*) could be found in oleaster (*Cotinos*) and they wondered whether well-cared-for oleaster could lead to cultivated olive. This reveals that the passage from oleaster to cultivated olive and vice-versa was not obvious (Charles-Dominique et al. 2009). A denomination of cultivated olive (=cultivar) usually corresponds to a clone (Pilon et al. 2009; Ravet et al. 2009). Each denomination is recognised using about 30 descriptors for trunk, leaf, flower and fruit shape (Ravet et al. 2009). However, any of

Style : IEEE

Olive origin is still unclear. The Greeks questioned whether the possible origin of cultivated olive trees (*Elaie*) could be found in oleaster (*Cotinos*) and they wondered whether well-cared-for oleaster could lead to cultivated olive. This reveals that the passage from oleaster to cultivated olive and vice-versa was not obvious [1]. A denomination of cultivated olive (=cultivar) usually corresponds to a clone [2]. [3]. Each denomination is recognised using about 30 descriptors for trunk, leaf, flower and fruit shape [3]. However, any of these criteria enables a strict differentiation between cultivated olive and oleaster.

- « Refresh » pour prendre en compte toute modification dans la collection Mendeley

# Import de références dans Word à partir de Mendeley Web

- Procédure accessible seulement sur Windows et pour les versions Word 2010 ou sup. Elle utilise le module de citation de références de Word.

- Pour exporter des références :

- Ouvrir la bibliothèque Mendeley Web
- Sélectionner les références à exporter
- Cliquer sur Export, puis sur Microsoft Word, ce qui entraîne le téléchargement d'un fichier .xml

- Ouvrir Word et aller dans le menu "Références" puis "Gérer les sources."
- Sélectionner le fichier.xml pré-enregistré. Vos références sont alors accessibles via l'outil de gestion bibliographique de Word

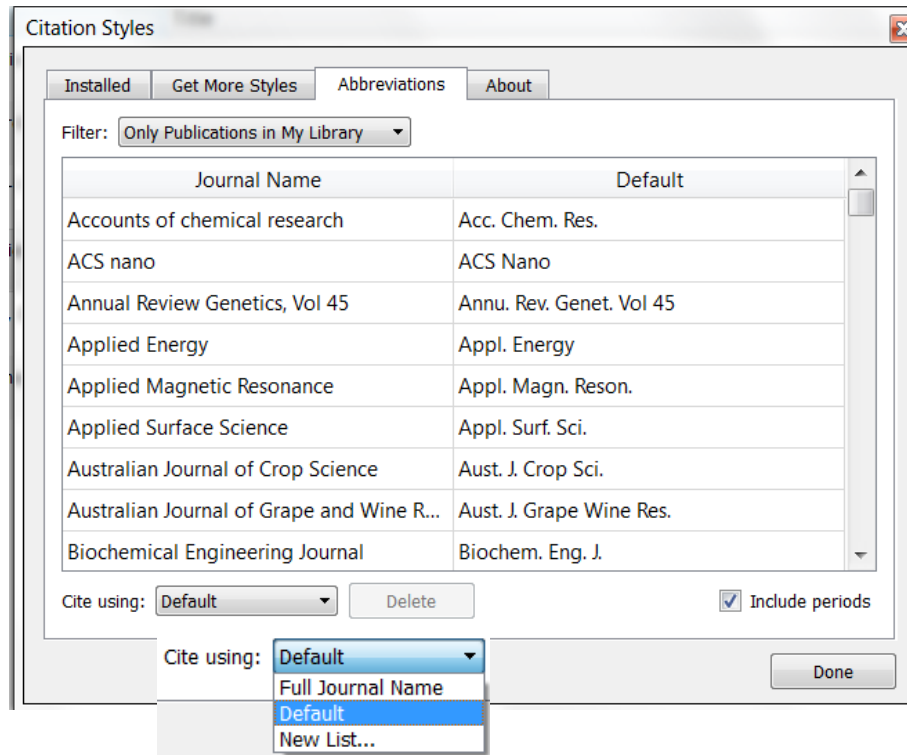

- Le nombre de styles de citation dans Word est limité mais on peut en installer à partir de Bibword.  
**Attention :** le système de gestion bibliographique de Word est différent de celui de Mendeley. **Les utiliser sur le même document conduit à générer deux séries de citations et deux listes bibliographiques.**

## S5-4 Gérer les formes des titres de revues

# Gérer les formes des titres de journaux - développé / abrégé - (1/2)

## Rejoindre un groupe privé

- L'invitation doit être acceptée par l'invité (elle apparaît dans les notifications du compte du propriétaire)
- Les invités ont accès au groupe, peuvent y ajouter des références et des PDF, annoter les documents

Accès au groupe à partir de Mendeley Desktop

Accès au groupe à partir de My Library (web)

## S6-3 Mendeleïev et la rédaction collaborative

1

A. a collecté des références dans sa base Mendeley

Niveau 2

A crée un groupe « **NotrePub** » qu'elle partage (groupe privé) avec un collègue B : B accède ainsi aux réfs + fichiers pdf de A

2

Projet de rédaction collectif : possibilité de partager des références (groupe public et privé) et/ou des annotations de PDF (groupe privé uniquement)

A travaille sur un manuscrit (Word) et y intègre des références à partir du groupe partagé « **NotrePub** ». Elle annote certains PDF

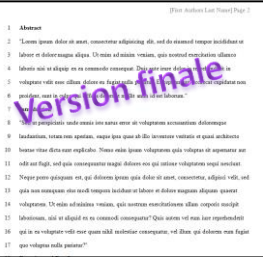

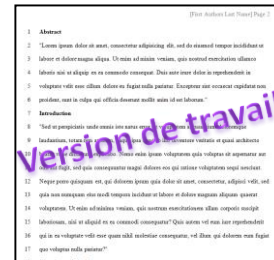

3

Elle envoie le fichier Word par mail à B. ou le dépose dans un espace collectif

4

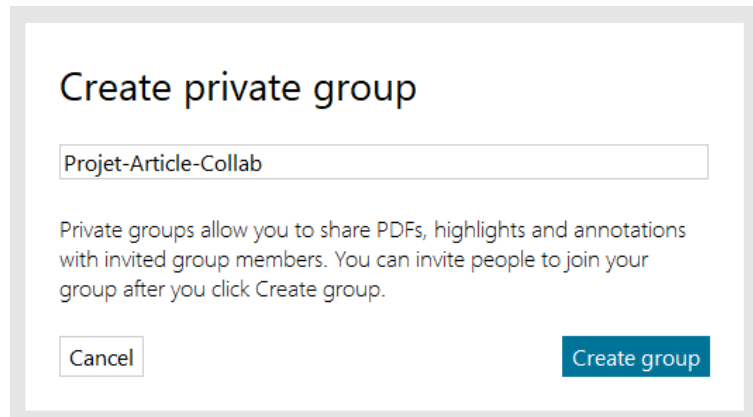

B. travaille à son tour sur le fichier Word. Via le groupe partagé, il accède aux réfs de A ou intègre de nouvelles références de sa base. Il accède aussi aux notes / pdf de A et peut les compléter

5

## Procédure pas à pas (1)

1. A (=Dominique Le Goff) crée un groupe privé dans sa base : Projet-Article-Collab

The screenshot shows a dialog box titled "Create private group". At the top, there is a text input field containing "Projet-Article-Collab". Below the input field, there is a paragraph of text: "Private groups allow you to share PDFs, highlights and annotations with invited group members. You can invite people to join your group after you click Create group." At the bottom left, there is a "Cancel" button, and at the bottom right, there is a blue "Create group" button.

2. Il invite B (Dominique L'Hostis) à partager ce groupe :

The screenshot shows a dialog box titled "Invite people to the group". At the top, there is a text input field containing "dominique.lhostis@inrae.fr". Below the input field, there are two buttons: a "Skip" button on the left and a blue "Send invites" button on the right.

## Procédure pas à pas (2)

### 3. B reçoit l'invitation de A par mail et l'accepte

**ABSTRACT**

Many plant tissues can be observed thanks to the autofluorescence of their cell wall components. Multispectral autofluorescence imaging at the macroscopic scale is a rapid efficient way of observing samples with a large field of view (>1 cm<sup>2</sup>) and a nice resolution (<3 μm per pixel). The objective of this work was to evaluate autofluorescence multispectral imaging at the macroscopic scale to identify the tissular origin of particles through their autofluorescence profiles. The pericarp and aleurone layer of wheat grain were used to compare contrasted autofluorescence profiles measured in cross sections and particles. Air and water mounting media were tested. Principal component analysis and variance analysis showed that the autofluorescence properties were retained from cross sections to particles. The mounting media modified the autofluorescence profiles and water was found to be better to observe both particles and sections. These results show that multispectral autofluorescence imaging at the macroscopic scale can be used to identify the histological origin of particles.
